Dataset Facts

Chicago Community Population

Dataset size	77 records | 30 fields
Record unit	One Chicago community area

Motivation

Publisher	Chicago Health Atlas
Platform partners	CDPH, UIC PHAME Center, Metopio
Primary original source	U.S. Census Bureau / ACS
Research aim	Demographics and air-pollution comparisons

Composition

Geographic scope	All 77 Chicago community areas
Reference label	ACS Year 2023 (CSV field)
Time window	2019–2023
Household income	5 household-count brackets
Age and sex	12 population-count columns
Race and ethnicity	Counts; categories can overlap
Missing cells	0 null or blank cells found

Collection

Original collection	American Community Survey
Relevant source tables	B01001 (age/sex), B03002 (race)
Export type	Custom indicator-selection CSV

Cleaning and Labeling

Rows removed	None documented for population EDA
Numeric parsing	Removed commas; cast income counts
Derived features	Household totals and income shares
Data-quality note	Some subtotals differ by 1–2 people

Uses and Distribution

Intended uses	Community-level comparisons
Format/access	Public CSV via Chicago Health Atlas
Reuse	Download, processing, redistribution reported

Maintenance and Evolution

Platform	Atlas receives ongoing updates

Responsible use: Group patterns are not individual attributes; 2023-labeled demographics vs. 2025–2026 pollution data; correlation does not demonstrate causation.

Provenance: Group's custom 30-column Chicago Health Atlas CSV ('Chicago_Community_Population_Data.csv'), validated against the group's EDA documentation. POP/PCT/INC pages describe related indicators but do not verify every field in the custom export.

Sources: Chicago Health Atlas; Population (POP); Demographics (PCT); Income (INC).

Reporting caution: The source CSV says `ACS Year = 2023`, but its precise ACS multi-year reporting period and the release/version used for the custom export have not been established. The Atlas's current standalone POP export is *not* numerically identical to the team's custom CSV.
